

nanoTechnology Systems Pty Ltd relocate to nanoCENTRE

Melbourne, 12th November 2010

nanoTechnology Systems announced today it will relocate to a new purpose built facility in Port Melbourne, Australia on the 20th of December 2010.

Called the “nanoCENTRE” the new facility will house all operations including sales, service and warehousing.

The relocation is necessary to accommodate the Company’s continual growth and to ensure a solid infrastructure enabling the ability to increase capacity to continue serving Customers for the long term.

“When Customers invest in our Products and Services they depend on us to support them for the life of the equipment. The nanoCENTRE will ensure we are in a solid position to deliver this Customer support. This is the advantage of being a wholly Australian owned Company where the investment is in local support and infrastructure,” says Peter Hanan, Managing Director nanoTechnology Systems

New in this facility will be a mechanical and an electronic workshop, additional 1000m² of warehousing (1800m² in total) and doubling of the office space to 550m². To ensure quality and speed of spare parts a 36m² cleanroom store and an ESD protected packaging area have also been included in the new Centre.

“Logistically the nanoCENTRE is in an ideal location. It is within 3 kilometers of the Melbourne CBD, it is in the very heart of transport traffic and freight forwarders and within easy access to Melbourne Airport. Stocked parts can be dispatched within hours of the request coming into the centre and travel to our Customers will be faster and easier whether they be local, interstate or overseas.” says Yvonne Li, Operations Manager nanoTechnology Systems.

Public transport and City Link are literally at the front door. The nanoCENTRE will have state of the art fibre optic internet connection allowing high speed connections to and from nanoTechnology Systems Customers and their equipment.

“The relocation raises nanoTechnology Systems to the next level of commitment to our Customers and Employees,” says Jocelyn Carpenter, Executive Account Manager nanoTechnology Systems. “It is part of our strategy to continually improve our Support to our Customers”.

Situated in the CitiTech Technology Park the nanoCENTRE will ensure Australian and New Zealand Customers of nanoTechnology Systems and their exclusive suppliers* will be investing in a long term partnership.
